PRESS RELEASE

A new Antipollution Barge has been delivered successfully by New Hellenic Shipyards

New Hellenic Shipyards have successfully finalized the new building of an Antipollution Barge ordered by a foreign client, for a project in Israel.

The dimensions of the barge are L=22.5m, B=8.5m and T=1.1m. It is equipped with a generator, 2 marine cranes, compressor, winch with capacity of 20t, vertical capstan, 4 anchor winches, retractable accommodation area, storage area, communication electronics and the required infrastructure for interconnection with the antipollution equipment.

The barge has been designed and constructed by our experienced technical staff under the strict supervision of an IACS member classification society.

New Hellenic Shipyards completed the project in time and budget, keeping at the same time the required quality standards and full conformance with corresponding rules and regulations, thus achieving high level of customer satisfaction.
